**Interview Questions****15m****1. Briefly describe the correct usage of the following HTML5 semantic elements:** header, article, section,

footer    The header element represents the header of a section. It represents a section of self-contained content that forms an independent part of a document or site. The section element represents a section of a document, typically one that includes a heading. Similar to the header, the footer element represents the footer for a section or document.

**2. Describe the relationship between the header and h1 tags in HTML5.**

The header section is the header of a section. so it is located at the top of the section. h1 headings could be located anywhere in a web page but we mostly use them in the header section because it highlights the header with its importance.

**3. What is the difference between span and div?**

Span is an inline element and it occupies a space equal to its content. div is a block element and no matter how big or small its content, it occupies the whole block.

**4. What are the advantages of CSS?**

By the help of css, we shape our html page and add good animations to it.

**5. Explain universal selector.**

It is the selector which affects all the selectors in css.
